

Is Your Home a Healthy Home?

Find out for FREE!

Isles can assess your home or apartment for hazardous lead, asthma triggers such as mold and pests and other indoor safety issues – *at no cost to you.*

After the assessment, which takes about an hour, we will provide you with information about how to protect your family from lead, asthma triggers, pests, indoor chemicals and other safety issues. If serious issues exist, we will provide you with resources and information on where to get more assistance. We will also supply you with a healthy home kit for participating.

Who should get this assessment?

Anyone who owns a home or rents an apartment could benefit from this assessment. It is especially important if you live in a unit that was built before 1978 or if someone in your home is suffering from asthma. *We also welcome landlords and non-profit organizations to have assessments on their rental units or for their clients.*

Why should I?

Many common hazards in the home are not even visible. Tiny bits of **lead typically found in household dust**, for example, can cause serious and lifelong health effects for children, including learning disabilities, behavior problems and other serious health issues. Children with lead poisoning don't look or act sick! Unseen and easily addressed **asthma triggers** may be all throughout your home and you wouldn't even know it. A misplaced **carbon monoxide** monitor or smoke detector could leave you unprotected from deadly, invisible gas or a potential fire.
